## PROFESSIONAL PROFILE

Senior IT Project Manager based in **Astana, Kazakhstan**, with **8+ years** delivering web platforms and business-system integrations end to end — and a working developer's background: **70+ web projects built hands-on** before and alongside **50+ projects led as a manager** — so I lead engineering teams on **architecture, estimation and technical trade-offs**, not only on timelines. Delivered **10+ API integrations** with ERP, inventory and CRM systems (1C, MoySklad, Bitrix24, amoCRM). Spent **nearly four years working remotely with an international team** at InstaForex, coordinating across time zones including Gulf business hours. My GMT+5 time zone gives a convenient overlap with the Middle East, Europe and Asia. Seeking remote roles only.

## CORE COMPETENCIES

### DELIVERY & PROCESS

Agile / Scrum · Kanban · Waterfall · sprint planning · backlog prioritisation · estimation · risk & issue management · roadmaps & Gantt planning

### TECHNICAL

REST API integrations · ERP / CRM systems (1C, MoySklad, Bitrix24, amoCRM) · payment gateways · web & application architecture · PHP, 1C-Bitrix, WordPress, HTML/CSS · QA process design

### TOOLS

Jira · Confluence · Bitrix24 · Trello · Planfix · Notion · Figma · Google Workspace

### REQUIREMENTS & DOCUMENTATION

Business & technical requirements gathering · technical specifications (SRS) · user stories · acceptance criteria · scope & change control · UAT coordination

### STAKEHOLDER & TEAM

Client & vendor communication · cross-functional leadership (dev, design, QA, marketing) · remote / async team management · executive status reporting

### BUSINESS

Business-value prioritisation · budget & timeline ownership · pre-sales scoping & estimation · SEO / performance-marketing alignment · KPI-driven delivery

## PROFESSIONAL EXPERIENCE

### Independent IT Project Manager — Contract

**Jul 2026 – Present**

Remote · **Direct clients** · based in Astana, Kazakhstan

- Deliver web and integration projects for direct clients on a contract basis, assembling and leading a vetted network of developers, designers and QA engineers scaled to each project.
- Own the full engagement — discovery, estimation, requirements, delivery and post-launch support — as the single point of accountability for the client.

### Senior Project Manager

**Sep 2021 – Jun 2026**

**factum.** — digital agency: web development, systems integration & digital products · factum.agency · Astana, Kazakhstan (remote / hybrid)

- **Owned end-to-end delivery of 50+ web and digital products** — corporate portals, e-commerce platforms, business web systems and landing pages — from requirements gathering and estimation through release, handover and support.

- **Cut average delivery time by 20–25%** by introducing structured sprint planning, business-value backlog prioritisation and team-owned estimation in place of ad-hoc task assignment.
- **Reduced production defects by ~35%** by formalising requirements up front — written specifications, user stories and explicit acceptance criteria signed off before development started.
- **Delivered 10+ complex API integrations** connecting client web platforms with 1C ERP, MoySklad inventory management, Bitrix24 and amoCRM, plus payment gateways and third-party services — covering data mapping, error handling and reconciliation.
- **Led cross-functional teams of 5–8** (frontend, backend, design, QA), running sprint planning, daily coordination, retrospectives and capacity planning across Agile/Scrum and Kanban workflows.
- **Raised delivery transparency and team throughput by ~30%** by rolling out Jira, Bitrix24 and Trello with defined workflows, definition of done, and stakeholder reporting against roadmaps and Gantt plans.
- Served as the **technical counterpart for clients and stakeholders** — translating business needs into engineering tasks, scoping change requests, and managing timeline, budget and risk expectations before they became escalations.

### Project Manager

**Nov 2017 – Aug 2021**

**InstaForex** — international online trading broker (forex, CFD, crypto) · **Fully remote from Kazakhstan**, working with the company's international team

- **Worked remotely with a distributed international team for nearly four years**, running day-to-day coordination across time zones, including Gulf business hours.
- Managed continuous improvement of the broker's **primary client-facing website**, converting business requests into clear specifications and assigning work to developers, designers, QA engineers and content specialists.
- Owned the task pipeline across a multi-disciplinary team: setting priorities, defining acceptance criteria, reviewing completed work and keeping releases on schedule.
- Coordinated development of a **desktop cryptocurrency trading application** — feature planning, testing cycles and release coordination with the engineering team.
- Operated in a high-availability financial-services environment where downtime carries direct commercial cost.

## TECHNICAL BACKGROUND

> A practising developer as well as a manager — **70+ web projects built hands-on** in custom web development, **PHP**, **1C-Bitrix** (enterprise CMS & corporate-portal platform), **WordPress** and HTML/CSS, covering web application architecture and REST API integrations. This makes technical estimates credible, architecture reviews substantive, and delivery blockers something I can debug with the team rather than escalate around.

## EDUCATION

### BSc in Information Systems

L. N. Gumilyov Eurasian National University
Astana, Kazakhstan · Graduated 2021
